

# Research Core Facilities

The university's research core facilities are administered to promote excellence in research, innovation, and graduate education at the University of Oregon. To that end, these specialized facilities provide access to specific types of research capacity—equipment, material, data acquisition, data analysis, consultation and expertise, and other services.

## Animal Care Services

**Monte Matthews, Director**

541-346-4957

[acs.uoregon.edu/content/animal-care-services](https://acs.uoregon.edu/content/animal-care-services)

Animal Care Services is responsible for administering all activities related to the care and use of animals. Its functions include procurement of all live vertebrates for research and teaching, supervision of animal technicians, control of animal holding facilities, and provision of veterinary care. Animal Care Services also has the responsibility for developing and implementing a plan for obtaining accreditation from the Association for Assessment and Accreditation of Laboratory Animal Care International for the University of Oregon's animal care and use program.

## Aquatic Animal Care Services

**Tim Mason, Manager**

541-346-4598

Aquatic Animal Care Services provides support for research involving fish and other aquatic vertebrates. Its primary duty is to support the Zebrafish International Research Center, which has recently been expanded with the support of a National Institutes of Health American Recovery and Reinvestment Act facilities grant. This facility supports the work of dozens of researchers who use zebrafish as a model system for genetics, development, host-microbe interactions, and neurobiology. Zebrafish research was founded at the University of Oregon in the early 1980s by George Streisinger and has since spread to include thousands of researchers drawn from institutions around the world.

## Bowerman Sports Science Clinic

**Michael Hahn, Director**

541-346-3554

[bssc.uoregon.edu](https://bssc.uoregon.edu)

The Bowerman Sports Science Clinic is a regional outreach facility charged with improving the health, fitness, and well-being of athletes in and around Eugene, Oregon. A variety of services are provided, including physical assessments of current fitness levels, potential injury mechanisms, and sport-specific training advice to help athletes achieve their individual performance goals.

## Center for Advanced Materials Characterization in Oregon

**Kurt Langworthy, Director**

541-346-3660

[camcor.uoregon.edu](https://camcor.uoregon.edu)

The Center for Advanced Materials Characterization in Oregon is a user facility housing a comprehensive array of materials characterization instrumentation and expertise to serve the needs of researchers on the University of Oregon campus, regional industries, and academic

institutions. The facilities provide infrastructure for research in chemistry, nanoscience, engineering, physics, materials science, geology, bioscience, and optics.

## Center for Assessment, Statistics, and Evaluation

**David DeGarmo, Director**

541-346-6554

[case.uoregon.edu](https://case.uoregon.edu)

The Center for Assessment, Statistics, and Evaluation serves as a resource for faculty members and graduate students and the larger community, providing technical support for statistical analysis and research design using a variety of models and software; assisting researchers and practitioners in assessment and measurement issues on instrument development generally and on e-assessments specifically; and providing program evaluations and technical support for state and local educational agencies throughout Oregon as well as departments within the university.

## Genomics and Cell Characterization Core Facility

**Doug Turnbull, Director**

541-346-5170

[gc3f.uoregon.edu](https://gc3f.uoregon.edu)

The Genomics and Cell Characterization Core Facility supports scientific research at the University of Oregon by offering genetic and genomic technologies. The facility provides in-house services and specialized equipment, including Sanger DNA sequencing, microarray-based genotyping, microarray printing, robotics for high-throughput manipulation of DNA samples, and next-generation, Illumina-based, high-throughput DNA sequencing and associated bioinformatics. In the near future, the facility will offer cell-sorting services.

## Greenhouse Facility

**Brian Dykstra, Manager**

541-346-4550

[uogreenhousefacility.uoregon.edu](https://uogreenhousefacility.uoregon.edu)

The University of Oregon Greenhouse Facility comprises more than 6,000 square feet of greenhouse space and a one-acre field to support research and teaching activities. The facility consists of a small greenhouse on the fourth floor of Onyx Bridge, two large greenhouses near Campus Operations, and the Quonset, with an incubator, growth chambers, drying ovens, potting bench, and more. The facility supports the research and teaching missions of the faculty and students in multiple academic departments and institutes across the university, as well as many universities throughout the country. The facility is staffed by a part-time greenhouse manager and by student workers.

## Histology and Genetic Modifications Core Facility

**Ute Hostick, Manager**

541-346-4935

[hgem.uoregon.edu](https://hgem.uoregon.edu)

The facility provides all the services necessary to produce and maintain genetically modified mice. These services range from designing projects to maintaining colonies. The facility also houses histology services.

## **Robert and Beverly Lewis Center for Neuroimaging**

**Fred Sabb, Director**

541-346-0337

lcni.uoregon.edu

The Lewis Center for Neuroimaging, a component of the Brain, Biology, and Machine Initiative at the University of Oregon, supports interdisciplinary, multifaceted research in cognitive neuroscience and biological imaging. The center has a Siemens Magnetom Skyra 3T magnetic resonance imaging (MRI) unit and full capabilities for the design and fabrication of magnetic resonance coils to support a broad range of research needs and applications.

## **Technical Science Administration**

**John Boosinger, Director**

541-346-4683

tsa.uoregon.edu

The Technical Science Administration is a collection of professional machinists and electrical engineers who help support internal and external research projects and equipment. The shops prototype sophisticated instrumentation for novel research projects, engineer creative solutions and products, and repair, upgrade, or retrofit existing scientific instrumentation.
